

Fowler

Digitrix II: Depth Micrometer

A 0-6" (0-150mm) Depth Micrometer (interchangeable rod style) combined with all the advantages of Fowler's Digitrix II Micrometer.

The Digitrix II Depth Micrometer is an extremely accurate way to obtain measurements of the depth of small holes, small fabricated articles with grooved or elevated surfaces or varying depths and heights. Six easily interchangeable rods (diameter .168") are included with each set, together with a wrench, batteries and deluxe wood storage case.

As with all Fowler Digitrix II Micrometers, the Depth Micrometer is an instrument of superior design and accuracy. An integral microcomputer provides for statistical analysis and a wide range of automatic aids for the user. The large LCD readout assures you of fast, error-free readings at all times.

The Digitrix II Depth Micrometer features a 4" satin chrome finished base for sound, reliable readings. The six interchangeable rods permit a 0-6" (0-150mm) range, and the instrument has a full 0-1" travel.

The Digitrix II Advantage:

- Includes all the features of the original Digitrix II Computerized Micrometers.
- True inch/metric conversion. Large LCD is easily read to .0001" (.001mm) with a .00005" indicator.
- Output allows connection to the QC Printer/ Calculator, data-loggers and interfaces for SPC applications.
- Satin chrome finish, ratchet thimble and locking knob.
- "Hold" feature holds values in the display.
- Absolute/relative modes allow measurements of the true size or comparison measurements of part to master.
- Uses 2 #54-902-110 batteries (included).

Order No.	Description	Base Size
